Order one of our first
locally-made solar hot
water systems!

**SAVE MONEY,
REDUCE POLLUTION,
CREATE LOCAL
MANUFACTURING
JOBS**

Our cooperatively-owned factory in the Latrobe Valley is ready to grow!

SOLAR HOT WATER

Our premium quality stainless steel solar tanks (made in Morwell, with a 15-year warranty) can be used with either

- a **Solar Heat Pump** for a simple hot water solution that doesn't need roof space
- **Evacuated Tube Solar Collectors** on your roof, with a gas or electric booster to create an high-efficiency hot water heater for your household or business.

WATCH THE SAVINGS GROW

Water heating can account for 1/3 of total household energy costs.

Escape soaring gas & electricity prices, and reduce your environmental impact by heating your water with solar power!

Our new high-performing solar heat pump allows you to enjoy solar hot water without the need for expensive roof installations. OR it can be combined with solar PV panels for what Beyond Zero Emissions recommend as

“the best value way of providing hot water in a zero-carbon Australia”.

Eligible for both state & federal rebates!

ENERGY STORAGE OPTIONS

When the sun is shining use your solar hot water system to store energy as hot water in your premium insulated hot water storage tank, to be used when you need it– simple, affordable energy storage!

Earthworker has also partnered with local company **GridEdge** to assemble and supply their 100% recyclable, safe & environmentally friendly SoNick **household battery systems**.

Get in touch if you're interested in a battery storage, solar PV, solar hot water or a complete energy solutions package.

WHO ARE WE?

The Earthworker Energy Manufacturing Cooperative is a worker-run factory in the Latrobe Valley, providing dignified democratic employment opportunities and premium quality locally-manufactured clean energy technology. It is part of the Earthworker Cooperative network – **working to create sustainable, fair and democratic economies**.
